

# HOW CAN DIRECT PRIMARY CARE SAVE ME MONEY?

## **Copays and insurance optimization:**

- The average family with two kids spends \$500-\$1000 on copays each year while still having to pay for office visit fees after the fact to meet their deductible. Direct Primary Care eliminates copays and confusing bills, and allows you to adjust your insurance plan to better suit your needs while prioritizing unlimited healthcare.

## **Time off work and school:**

- In the traditional pediatric practice, availability after hours or access to a quick answer from a doctor is rare. Sending your doctor a text for concerns instead of having to schedule an appointment can save you from having to take time off work and taking your kid out of school to get your concerns addressed.

## **Labs and in house pharmacy:**

- We are able to save our patients' time and money by having multiple medicines on site and ready to dispense. We have also been able to negotiate lower prices for lab tests, imaging, and medications because we aren't tied to insurance contracts. This can result in significant savings on common services.

## **Less frequent ER or Urgent Care visits:**

- Direct access to your doctor allows concerns to be addressed quickly by a provider who knows your child, preventing unnecessary and expensive trips to the ER or Urgent Care.

## **PRICING:**

**Monthly Fee  
Per Child:  
\$165**

**Annual Fee  
Per Child:  
(with 5% annual discount)  
\$1881**
